## USES OF AGRIBOOST™ IN GOLF COURSES

**AgriBoost™** increases water retention, permanently conditions the soil, enhances fertility, decreases the need for fertilization and is environmentally safe.

- Water use efficiency is increased, thereby reducing frequent irrigation
- Maintains good soil aeration for the oxygen supply to the root system and improves soil structure
- Enables fertilizer nutrients to become available for uptake resulting in better plants, grasses and shrubs
- Mobilizes soil nutrients from the soil's own reserves
- Significantly reduces nutrient and fertilizer loss through heavy rains, leaching and irrigation, resulting in less environmental damage through water runoff
- Stores water-soluble nutrients in exchangeable forms, thus preventing leaching into groundwater
- Improves the cation exchange capability (CEC) of soil resulting in less fertilizer requirements
- Environmentally friendly and approved by the Organic Materials Review Institute (OMRI) for use in organic production
- Non-harmful to wildlife
